SENIOR FULL-STACK SOFTWARE ENGINEER

Senior Full-Stack Engineer with 8+ years of experience building scalable web applications across fintech, SaaS, and enterprise platforms. Expertise in React, Angular, Node.js, and cloud-native architectures. Proven track record of improving performance, accelerating CI/CD pipelines, and delivering high-impact features in fast-paced environments.

CORE SKILLS

Frontend: React, Angular, TypeScript, Redux, Svelte

Backend: Node.js, .NET Core, .NET Framework, Java, Spring Boot

Cloud & DevOps: AWS, GCP, Azure, Docker, Kubernetes, CI/CD (GitHub Actions, GitLab CI, Jenkins)

Testing: Cypress, Playwright, Jest

Databases: PostgreSQL, MSSQL, T-SQL

Other: LaunchDarkly, REST APIs, Microservices, Sitecore, Salesforce, Kafka, RabbitMQ, gRPC

PROFESSIONAL EXPERIENCE

UKG — Senior Software Engineer

May 2023 – Apr 2026 • Lowell, MA (*impacted by company-wide workforce reduction*)

- Developed and maintained enterprise-scale web applications using **Angular 13+**, **TypeScript** and **Node.js**, supporting thousands of users across desktop, kiosk and mobile platforms (Responsive and Android)
- Used AI-tools such as **GitHub Copilot** and **Claude** to accelerate production defect investigation and support, including debugging, log analysis, root-cause exploration, test generation, implementation planning, and code review while maintaining engineering ownership and validation.
- Developed and maintained a **Node.js backend API integration** and Backend-for-Frontend (**BFF**) layer that orchestrated internal **REST APIs** and services for Angular applications across desktop, mobile, and kiosk.
- Implemented **backend** concerns including **authentication/token** verification, request validation, routing, **API** response handling, **SSR** support, **WebSocket** communication, **cookies**, query parameters, and runtime configuration.

- Built and optimized **CI/CD pipelines (GitHub Actions)**, reducing deployment friction and improving release reliability
 - Built and maintained **GitHub Actions workflows** that managed to build artifacts in **GCP artifact storage** and supported automated validation, deployment readiness, and release traceability.
 - Supported **Jenkins-based CI/CD workflows** using **JFrog Artifactory** for artifact management, automated test execution, and release pipeline reliability.
 - Contributed to **domain adapter** development and maintained **SQL scripts** to support data **transformation**, backend **integration**, configuration updates, and reliable service-to-database workflows.
 - Implemented **end-to-end testing with Playwright**, ensuring higher code quality and reducing production defects
 - Automated **end-to-end (E2E)** testing by configuring **GitHub Actions** for both scheduled jobs and pull request validation, ensuring codebase stability
 - Orchestrated automated **Selenium** test suites within a Jenkins CI/CD pipeline, reducing manual validation time by 60%
 - Improved system observability using **Splunk and Grafana**, proactively resolving performance bottlenecks
 - Managed cloud infrastructure components in **GCP (CDN, storage, caching)**
 - Implemented feature flags using **LaunchDarkly** to enable canary releases and safe testing in production, reducing release risk by 65% and enabling instant rollbacks without redeployment
 - Participated in the **end-to-end development** of Web and Mobile UI, from initial coding and cross-environment testing to final production deployment
 - Implemented and maintained comprehensive UI **localization** across over 16 **languages**, enhancing global user experience and improving **accessibility**.
 - Mentored junior engineers and conducted code reviews to improve team quality
 - Collaborated cross-functionally with product and customer teams to resolve production issues and deliver features
 - Used **Keeper Security** for secret and password management to securely store, access, and share credentials across development and production-support workflows while following internal security practices.
 - Enhanced digital inclusivity by auditing and remediating web applications to **WCAG AA** standards and implementing **aria-labels** for **VoiceOver** compatibility
 - Applied **Behavior-Driven Development (BDD)** principles by designing Given–When–Then **test** cases in **TestRail** and implementing them as Playwright end-to-end tests integrated into CI/CD pipelines.
 - Practiced **Test-Driven Development (TDD)** by writing unit and integration tests prior to implementation, improving code quality, reliability, and maintainability.
 - Supported **development, pre-sale, and production** environments, working closely with **cross-functional** teams including product managers, backend engineers, UI / UX designers, accessibility specialist, linguistic service team (external), and customer-facing teams (pre-sale and customer support) to troubleshoot issues and deliver reliable features.
 - Experience working across **different engineering teams** and environments, helping coordinate frontend, backend, platform, and release-related work.
-

Pluralsight — Software Engineer III

Apr 2022 – Feb 2023 • Remote (*role eliminated during workforce reduction*)

- Built and maintained applications across a **microservices and micro-frontend architecture** using **Node.js, TypeScript, React, and Svelte** for high-traffic learning platforms.
 - Developed backend microservices using **Node.js and TypeScript** to support product features, API workflows, and service integrations.
 - Built modular frontend services and micro-frontend experiences using **React and Svelte**, integrated with distributed backend services.
 - Designed service-to-service integrations and event-driven communication patterns using **Kafka, RabbitMQ** and **gRPC**.
 - Maintained CI/CD pipelines using **GitLab CI and AWS ECS Fargate** for automated deployments across frontend and backend services.
 - Managed **AWS CDN configuration and caching behavior** to improve content delivery performance, reliability, and frontend asset distribution.
 - Partnered with product teams to translate business requirements into scalable technical solutions.
 - Mentored junior engineers and conducted code reviews to improve service quality, maintainability, and reliability.
-

Applied Systems — Senior Full-Stack Developer

May 2021 – Apr 2022 • Remote

- Delivered full-stack solutions using **Angular, React, TypeScript, C#/.NET Core, .NET Framework, MSSQL and Go**.
 - Built and maintained enterprise web applications with a focus on usability, scalability, and maintainable frontend architecture.
 - Played a key role in migrating a monolithic application toward a **microservices-based architecture**, using **REST and gRPC** for distributed service communication.
 - Developed and maintained automated deployment versioning for **preview and production branches**, including **major, minor, and patch version increments**.
 - Improved release traceability by automating semantic versioning across deployment workflows.
 - Built reusable libraries and shared components to improve developer efficiency across teams.
 - Designed and scaled end-to-end test frameworks using **Cypress**.
 - Implemented CI/CD pipelines and automated deployments using **GitLab CI and Octopus**.
-

John Hancock — Full-Stack Developer

Oct 2019 – May 2021 • Westwood, MA

- Developed and enhanced client-facing 401k web platforms using **React, TypeScript, ASP.NET Core, MSSQL, Sitecore, and RESTful APIs**.
 - Contributed to secure **authentication, authorization**, and data validation systems
 - Ensured Test coverage by writing **Unit Tests** and **Integration Tests**
 - Built responsive frontend features and integrated them with backend services to support secure customer-facing workflows.
 - Implemented and improved **MFA validation workflows**, strengthening authentication security and user verification.
 - Improved performance and reliability of application workflows across frontend and backend services.
 - Built secure authentication, authorization, and data validation features for customer-facing financial applications.
 - Improved test coverage by writing unit and integration tests.
-

SCRAM Systems — Software Developer

Oct 2018 – Aug 2019 • Littleton, CO

- Built internal tools and backend workflows using **.NET Framework MVC, .NET Core RESTful APIs, React, Electron, MSSQL Server, and Salesforce APIs**.
 - Modernized a legacy billing department service from **Visual Basic** to **.NET Core**, improving maintainability, service reliability, and long-term supportability.
 - Developed and maintained **.NET Core RESTful API** endpoints to support internal applications, service integrations, and business process automation.
 - Developed an **Electron desktop application with React** to support breathalyzer calibration workflows for the manufacturing department.
 - Implemented Salesforce integrations using Apex Classes, custom objects, triggers, Flow Builder, Process Builder, LiveChat, and RESTful APIs.
 - Supported asynchronous communication between multiple web services using **Azure Service Bus**.
 - Improved backend reliability through debugging, monitoring, production support, and issue resolution.
-

Vertafore — Software Engineer

Jan 2018 – Oct 2018 • Denver, CO

- Developed scalable single-page applications using **React and Redux (Saga & Thunk Middleware)**
- Built reusable UI components and improved test coverage with **Jest and Enzyme**
- Contributed to backend services using **Java and Spring Boot**
- Implemented **end-to-end testing with Selenium**
- Utilized **JDBC, Controller, Service, DAO, and Model layer** for back end components

- Close collaboration with engineering on **PostgreSQL** database schema additions and updates utilizing **Liquibase**
 - Experience with **UX prototyping tools** with **InVision**
 - Developed with **Test-Driven Development (TDD)** by writing unit and integration tests prior to implementation, improving code quality, reliability, and maintainability.
-

EDUCATION

Galvanize — Web Development Immersive (2017)

MSU Denver — Computer Science (2014-2014)

Community College of Denver — Computer Science (2012-2014)

Westwood College - Game Software Development (2010-2011)
